

PLANUNGSGESELLSCHAFT
FÜR UMWELT UND TECHNIK

PROFILE

Joachim R. Maxwitat
Managing Partner

Dr.-Ing. Kurt Nonnenmacher
Managing Partner

An engineering company for environmental technology, PUT GmbH was founded in 1994 by the two managing partners, Joachim R. Maxwitat and Dr.-Ing. Kurt Nonnenmacher. The objective was to deliver a range of engineering services, more specifically from detail engineering through to active commissioning, in the fields of power plant engineering, piping engineering, air pollution control, waste treatment plants, water and wastewater treatment plants and technical facilities.

Today, PUT is a modern, independent company of consulting engineers serving projects in all classical engineering fields, from concept development to construction management and plant commissioning.

Our particular strength lies in providing detail engineering services and design solutions for complex plants. We guarantee high flexibility and effective cooperation with all project participants during the realization of our projects.

For more information on our team, our present projects and references, please contact us directly via e-mail or telephone.
